SUMMARY

Senior iOS engineer with 13+ years building and shipping consumer applications across delivery, news, fitness, social, and e-commerce products. Experienced owning complex features end-to-end, shaping technical design, improving application architecture and performance, and coordinating delivery across product, design, backend, QA, and data teams. Deep Swift and UIKit experience with production SwiftUI, experimentation, testing, CI/CD, and developer tooling.

CORE SKILLS

iOS Engineering: Swift, Objective-C, UIKit, SwiftUI, MVC, MVVM/MVVM-C, RESTful APIs, WebSockets, application architecture, concurrency and multithreading

Product Engineering: End-to-end feature ownership, technical design and RFCs, experimentation, feature flags, performance optimization, accessibility, RTL support

Quality and Tooling: XCTest, Swift Testing, XCUITest, Maestro, Instruments, CI/CD, GitHub Actions, Bitrise, Jenkins, Fastlane, Xcode, SwiftLint, Python, AI-assisted development

EXPERIENCE

Wolt / DoorDash — Senior Software Engineer, iOS

May 2023 – September 2026 | Tokyo, Japan

Senior iOS engineer on a consumer delivery app operating in approximately 30 countries.

- Served as iOS client DRI for major Wolt+ initiatives, coordinating delivery across iOS, Android, web, backend, product, design, QA, and data teams in Germany, Finland, and Japan.
- Delivered cart and checkout subscription features that contributed to approximately 30% growth in membership sign-ups through experimentation and iteration.
- Designed a centralized service for Wolt Rewards on iOS, simplifying reward state propagation and keeping subscribed experiences synchronized across the app.
- Initiated and independently developed Telemetry Viewer, an internal analytics verification and debugging tool that accelerated experimentation and improved release confidence across teams.
- Authored technical design proposals and led reviews to align implementation across teams and platforms.
- Built Python and agent-assisted tooling for team testing workflows, eliminating multiple hours of repetitive preparation and coordination per testing session.
- Adopted AI-assisted development workflows and shared practical learnings with the team, leading to an invitation to present agent-based workflows to the broader engineering organization.

SmartNews — Senior Software Engineer, iOS

April 2019 – May 2023 | Tokyo, Japan

Senior iOS engineer on a consumer news application serving millions of users.

- Led the iOS implementation of SmartView v2, a next-generation article rendering pipeline, enabling incremental rollout through parallel implementations, feature flags, and fallback mechanisms.
- Implemented server-driven onboarding with SwiftUI, enabling rapid A/B testing of product experiences independent of application release cycles.
- Owned customer-facing features end-to-end across feed rendering, onboarding, navigation, push notifications, following, and article rendering.

- Collaborated with product, backend, and ML teams across Tokyo and San Francisco on major launches, including News From All Sides and live coverage of the 2020 U.S. election.
- Initiated the transition from Objective-C to Swift and established linting and formatting standards adopted across the iOS team.
- Promoted from Software Engineer to Senior Software Engineer in recognition of technical impact and project ownership.

Bodybuilding.com — Software Engineer, iOS

March 2013 – July 2018 | Boise, Idaho, United States

Developed native iOS applications across fitness tracking, social, and e-commerce products.

- Diagnosed feed-rendering bottlenecks with Instruments and moved layout computation off the main thread, achieving consistent 60fps scrolling performance.
- Led early adoption of Swift and guided production applications through multiple major Swift language migrations.
- Established CI/CD pipelines and release automation with Jenkins and Fastlane, improving development velocity and deployment reliability.
- Awarded Company MVP for delivering critical feed functionality during a team transition while maintaining release commitments.

EDUCATION

University of Illinois Springfield

Bachelor of Science, Computer Science | Minor: Mathematics
Summa Cum Laude
